SUMMARY

Full-stack developer with 2 years of experience shipping production SaaS across FinTech, HRTech, and EdTech. Backend: Python (FastAPI, SQLAlchemy, Celery), Node.js/Express, REST APIs, PostgreSQL, DynamoDB. Frontend: React.js, Next.js, React Native, TypeScript. Comfortable owning features end-to-end, from schema design to shipped UI.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Redux Toolkit, React Native, HTML, CSS, Tailwind CSS, Chakra UI

Backend: Python, FastAPI, Node.js, Express.js, REST APIs, JWT Authentication

Databases: PostgreSQL, MongoDB, DynamoDB, Redis, SQLite, Firestore

Cloud & DevOps: AWS (S3, Lambda, DynamoDB), Docker, Git, CI/CD

AI: OpenAI, Claude, Gemini, LangChain, OCR

WORK EXPERIENCE

Full-Stack Developer – Innover Labs, Pune, India

Mar 2025 – Present

- Built an AI-powered bank reconciliation engine (Python/FastAPI) with a SWIFT MT940 parser and Celery background workers, automating continuous matching against SAP ERP invoices.
- Led a 5-service invoice reconciliation module (orchestration, matching, allocation, validation, audit) handling split payments and partial allocations for enterprise clients.
- Built the real-time speech-to-speech translation pipeline for a live-interpretation platform: browser/phone audio streamed over WebSockets into Deepgram's live-streaming STT, with a bilingual mode running two simultaneous Deepgram connections and a confidence-buffering window to resolve which speaker was talking.
- Handled the Twilio Media Streams pipeline, converting μ -law telephony audio to linear PCM and re-chunking Google Cloud TTS output into paced 20ms frames for phone participants.

Full-Stack Developer (MERN) – Napworks, Punjab, India

Nov 2024 – Jan 2025

- Built two React/Redux admin dashboards giving the ops team self-serve access to user and analytics data, replacing manual reporting that previously required engineering time.
- Designed MongoDB schemas and aggregation pipelines for the analytics views, reworking queries that were timing out on larger datasets.

Freelance Full-Stack Developer

Mar 2026 – Jun 2026

- **HR & Workforce Management Platform:** Restructured a React Native (Expo) app into a module-first architecture to enable independent feature development, and implemented Keycloak OAuth2/PKCE authentication.
- Built a social engagement module (posts, events, polls, reactions, comments) and six leave-application workflows with manager approvals.
- **EdTech Exam-Prep Platform:** Built a Next.js 15 + Firebase-Admin backend-for-frontend layer to decouple the dashboard from an unreliable upstream API.
- Built a per-exam leaderboard engine and led a zero-downtime Firestore migration, re-rooting the question bank with no data loss.

PERSONAL PROJECTS

- **RealTime VideoCall** – Next.js/WebRTC video-calling app with a custom WebSocket signaling server (Node/Express, ws), room-based Clerk + guest auth, and real-time chat with rate limiting, heartbeat monitoring, and auto-reconnection. [Demo](#) — [GitHub](#)
- **Code Buddy** – VS Code extension for AI-powered inline code autocomplete, built on a pluggable fill-in-the-middle backend (local Ollama, Mistral FIM API, or self-hosted vLLM) instead of a vendor-locked API. [GitHub](#)
- **Framer E-commerce Store** – Next.js/TypeScript store, 7 pages, 95+ Lighthouse score. [Demo](#) — [GitHub](#)

EDUCATION

Bachelor of Computer Science Engineering – Sardar Beant Singh State University, Punjab, India

2020 – 2024

CGPA: 7.61
